

SEVERAL WAYS **DUCKLINGS** IS REDUCING ITS CARBON FOOTPRINT

We're passionate about making the world a better place for future generations. By changing our habits, we're reducing carbon emissions at Ducklings daily.

What changes have we made, and continue to make

1.

We ensure our appliances are in good working condition and are energy efficient. From the light fixtures to equipment, to the boilers.

2.

We appreciate the environment, and teach the children to do so too; From growing vegetables and composting to visiting allotments.

3.

We're reducing paper printing across all sites, to help reduce our environmental footprint.

4.

We recycle items properly and aim to repair/reuse items that can be repurposed in other ways.

5.

We focus on exposing the children to nature, so we go on nature walks no matter the weather.

6.

Water conservation is vital. Rain collection tools are used for gardening, broken taps are immediately fixed, and children are taught the proper way of flushing and washing hands.

ESSENTIAL TEACHING

"Teaching your children about their environment and how they can contribute to its upkeep, will help them to develop their own sense of responsibility when it comes to protecting their future surroundings."
